

# List of well-crafted UI Challenges

Here's a list of tasks and challenges that will help me judge your UI skills, each of them needs to be made with an eye for design, you can use any framework you want, may it be built using dart and flutter, or vanilla JS, CSS or any JS/TS frameworks, GSAP etc, or some tasks will be asking you to code in KML markup as long as it's your original code and you DON'T copy or use ChatGPT / any other AI or any such practices.

Also, care about semantics, **UX**, accessibility, cross-browser compatibility and performance is much needed.

Note: For app or web solution you can have all the 5 UI related challenges in the same app or web-app or make separate apps or web pages, either way is fine.

## Task 1: Google Voice UI

## Task 2: Google Gemini

## Task 3: Great KML: Night light in India during Diwali

(This has to be made using KML)

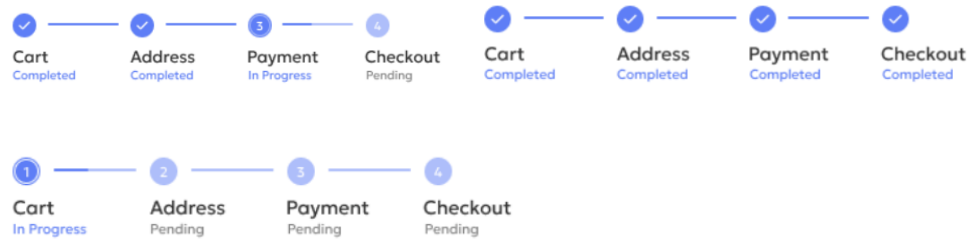

#### Task 4: 3D KML: Models

(This has to be made using KML)

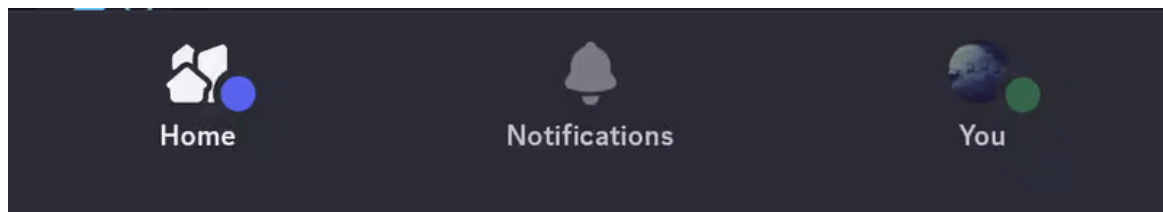

## Task 5: Progress bars

(Text labels can vary in your solution)

## Task 6: Animated icons

(Icons can vary in your solution)

## Task 7: Animated Tab effect

My Tasks
